

KANDIVALI LOCALITY'S STEPS TOWARDS RECYCLING – A SURVEY

KEY FINDINGS AND SUGGESTIONS

1. Total 59 people from the locality participated in the survey
2. From the survey it was evident that all are not aware of the recycling options that are existing in the area.
3. Societies should also continually review their waste management practices and interact with other societies to keep themselves abreast with the best practices in the area.
4. The housekeeping agencies are common across many societies. They can be asked to align with the best practices across societies.
5. Societies should compulsorily capture waste like sanitary napkins, diapers separately. Since these go through a completely different disposal method (by use of Incinerators). Incineration is a method by which controlled combustion of waste matter can be done with minimal environmental impact.
6. Sharing results of the survey in this update for some societies separately over and above each unused item at locality level.

COLLECTIVE WASTE FOR DISPOSAL?

During the survey, query was raised that if society gives collected waste for recycling then what should we select as option in the questionnaire. The questions were for primary generators of waste. And first section of the questionnaire, there was drawing given and child saying ‘Conserve our Future’ and ‘Conserve Nature’.

In many instances the recycling waste is collected by the society for disposal. In a scenario where destruction due to climate changes is becoming common, how do they ensure that their unused items / waste material do not land in landfills or oceans?

We should be responsible to ensure that when collectively such waste is recycled, we need to ensure waste is clean and dry. Most societies dump all kinds of dried waste in bin and get segregation done from third party (House Keepers). Such segregation may or may not be happening and we can support the process by ensuring waste is clean & dry.

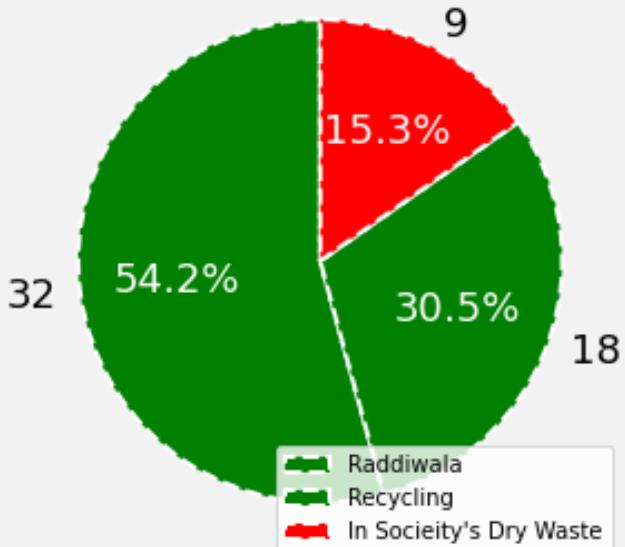

For nature's conservation if we give that bit to a third party without understanding how it is ultimately disposed then we do not give big importance to nature even at times when things are coming to a point of destruction.

As soon as we start taking steps, personally taking onus of our waste, things will automatically take a reverse trend in leaps. So take care of your waste at every step and ensure how it is ultimately disposed or reused!!

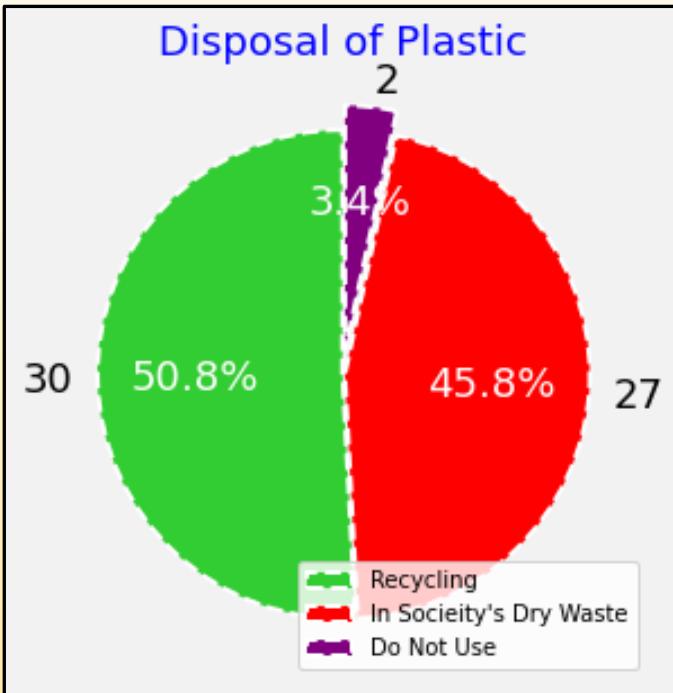

Distribution of how unused paper is being disposed

Disposal of Unused Paper

As per the survey, 85% of the locality people are disposing their unused paper by giving for Recycling or by giving to a local Raddiwala or some may be also upcycling by putting to various other uses.

Distribution of how plastic is being disposed

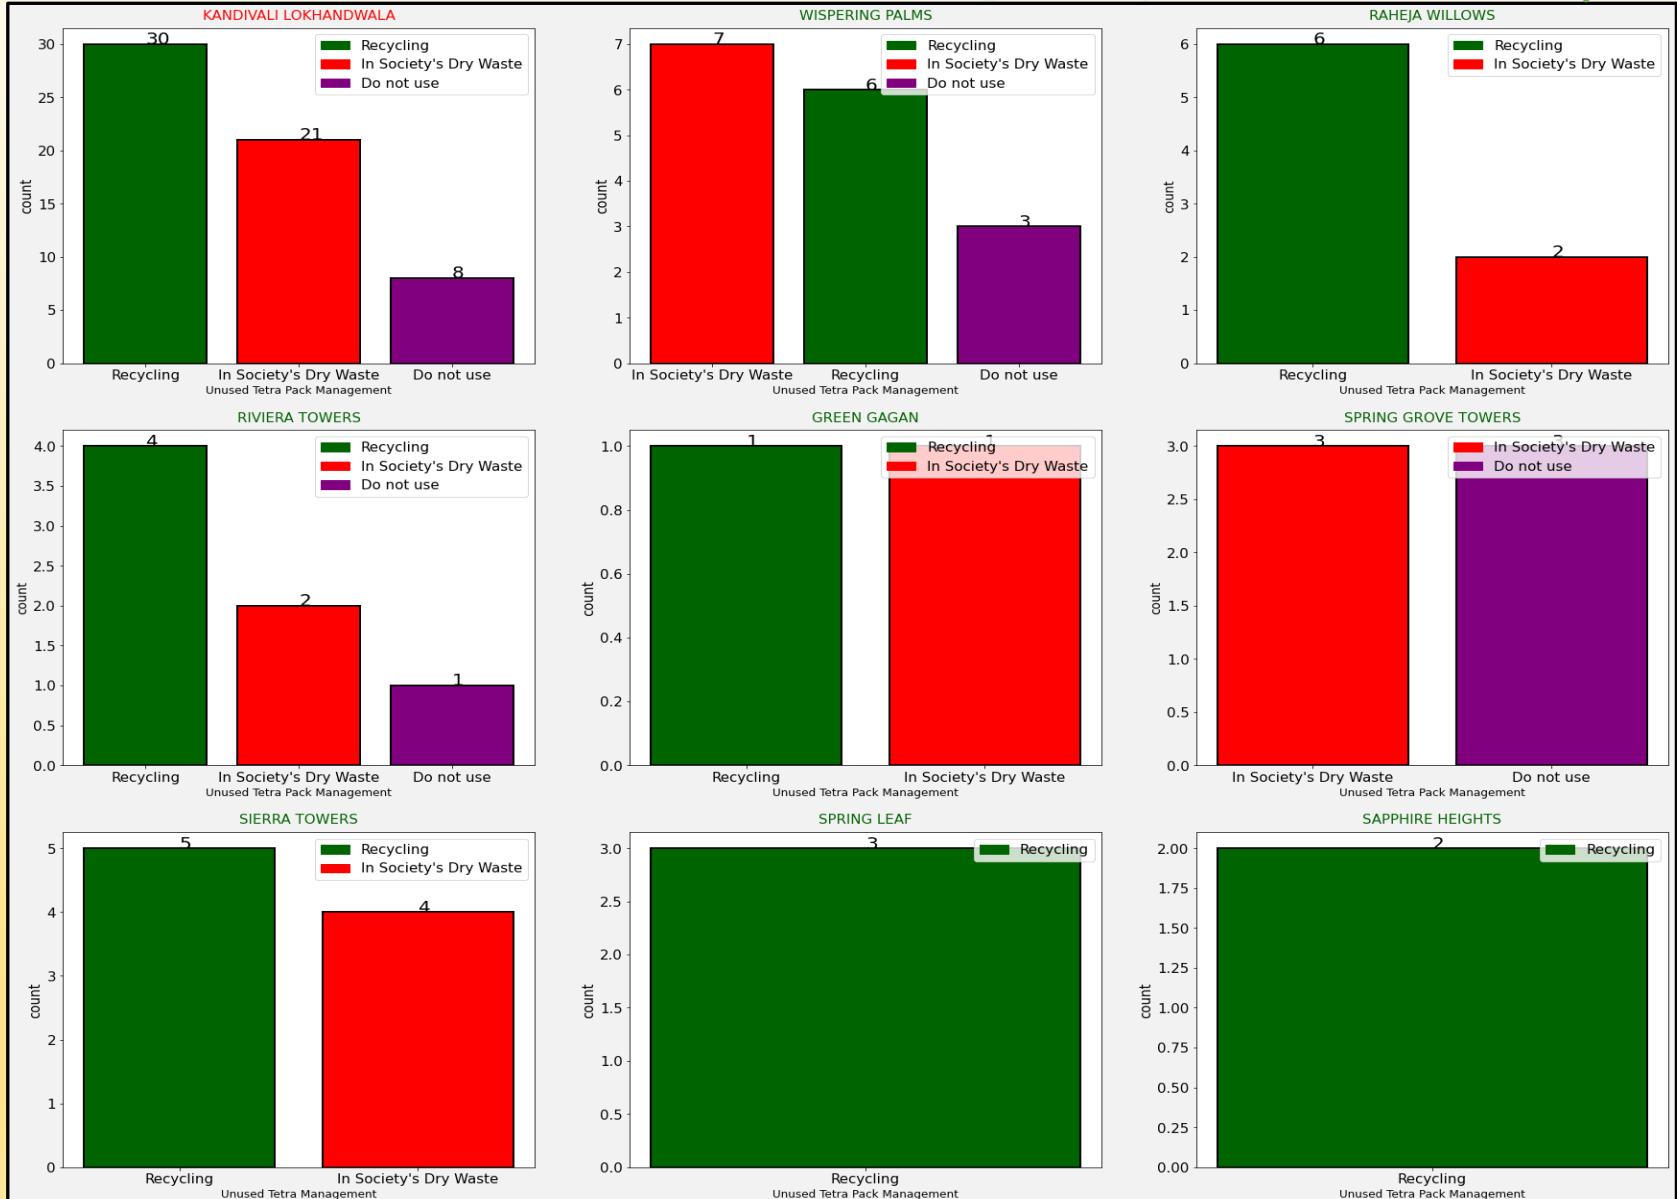

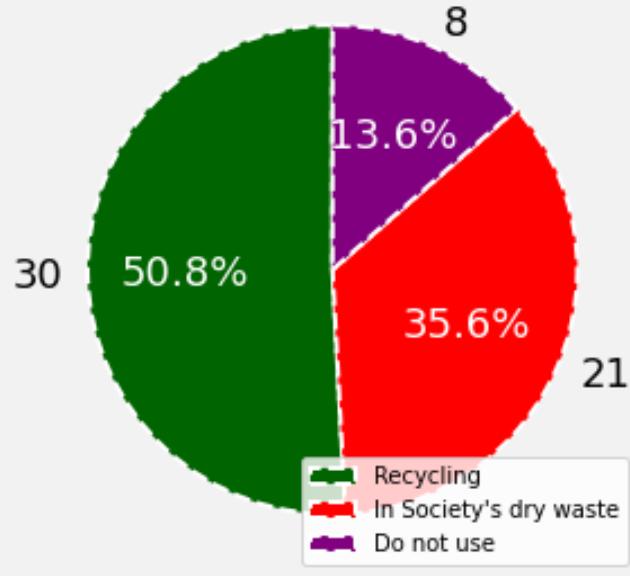

As per the survey, still only 51% of the locality people are disposing their plastic by giving for Recycling

Distribution of how unused Tetra Packs are being disposed

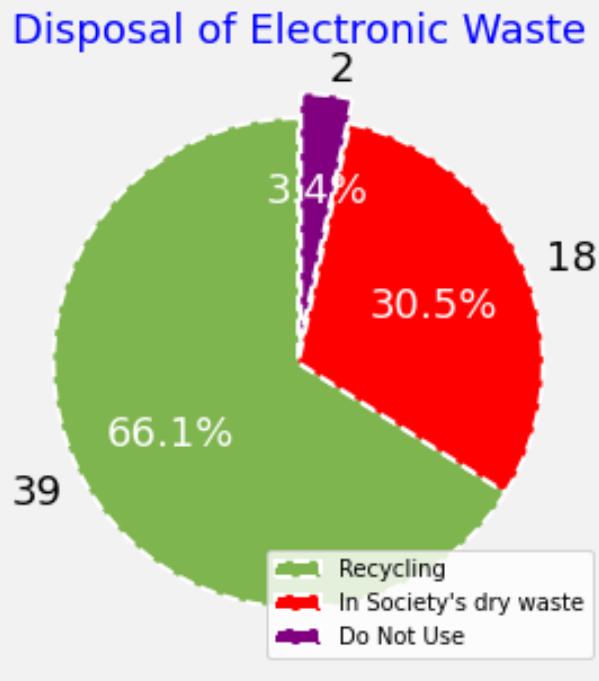

Disposal of Used Tetra Packs

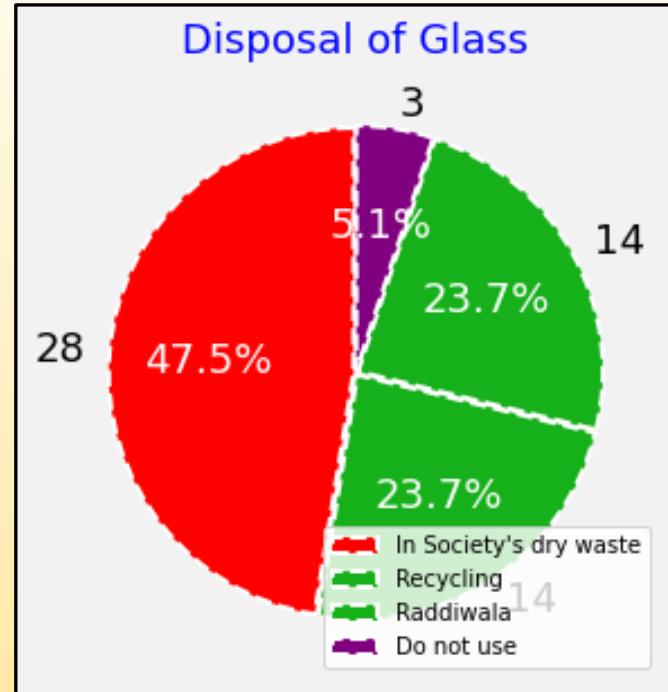

As per the survey, still only 51% of the locality people are disposing their unused Tetra Packs by giving for Recycling

Distribution of how unused electronic items are being disposed

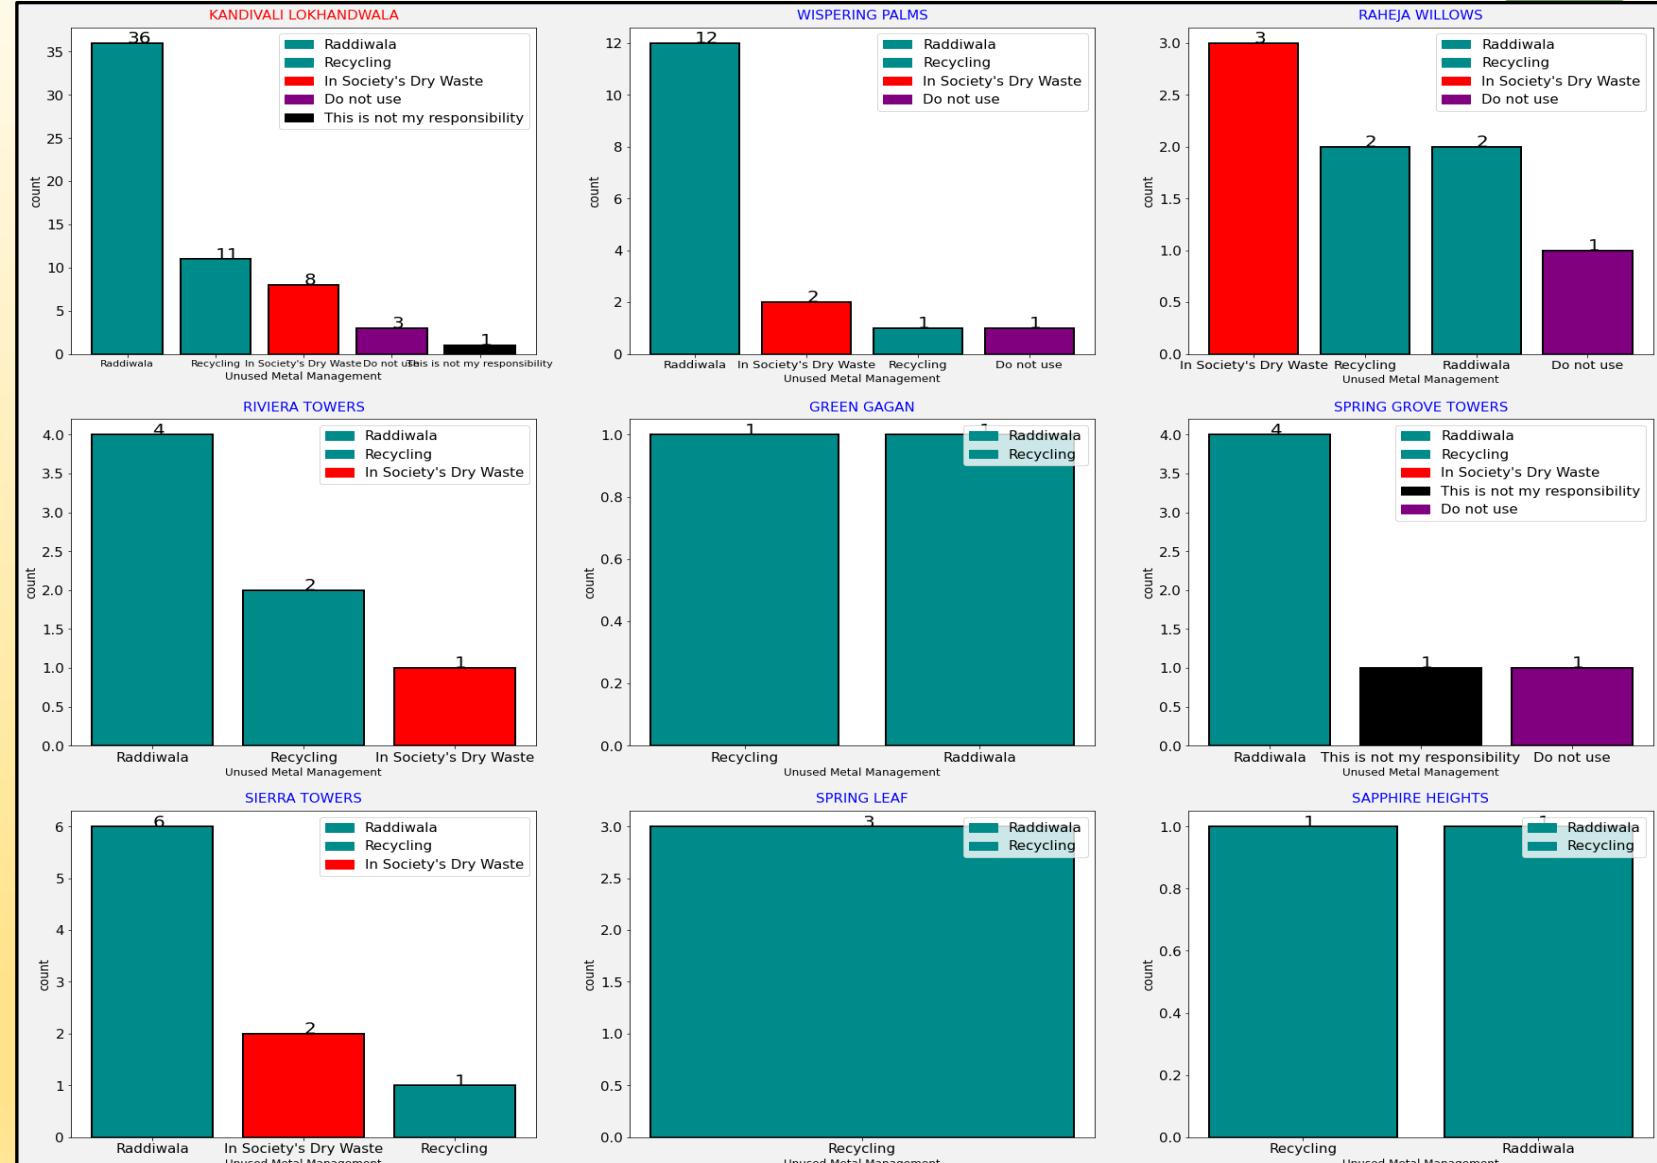

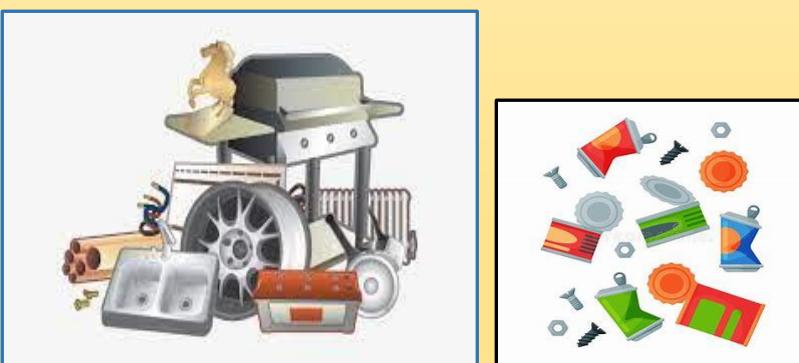

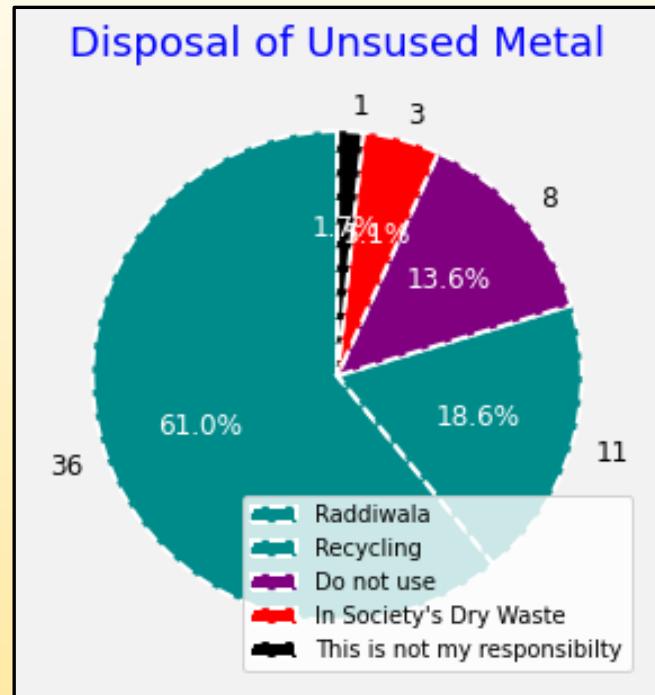

As per the survey, 66% of the locality people are disposing their unused electronic items by giving for Recycling

Distribution of how glass items are being disposed

As per the survey, **only 47% of the locality people are disposing their unused glass by giving for Recycling and mostly others are giving as part of society's dry waste**

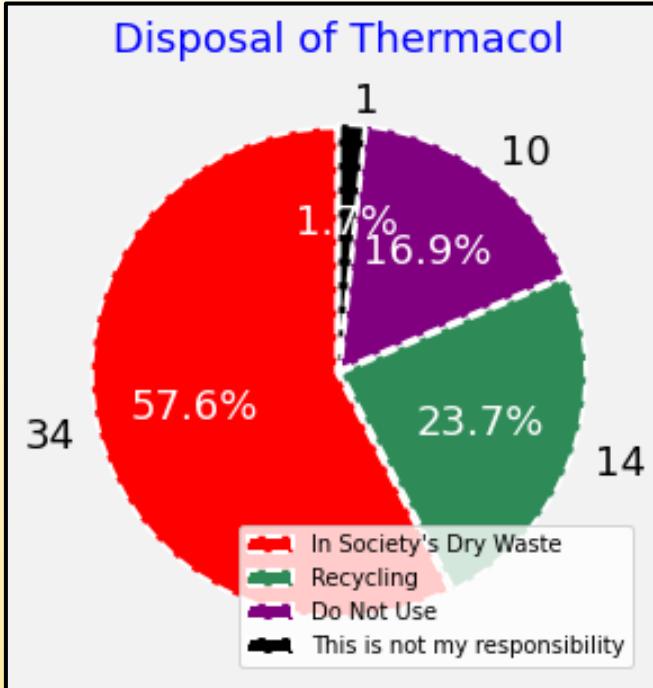

Distribution of how unused metal is being disposed

As per the survey, 80% of the locality people are disposing their unused electronic items by giving for Recycling or by giving away to a Raddiwala

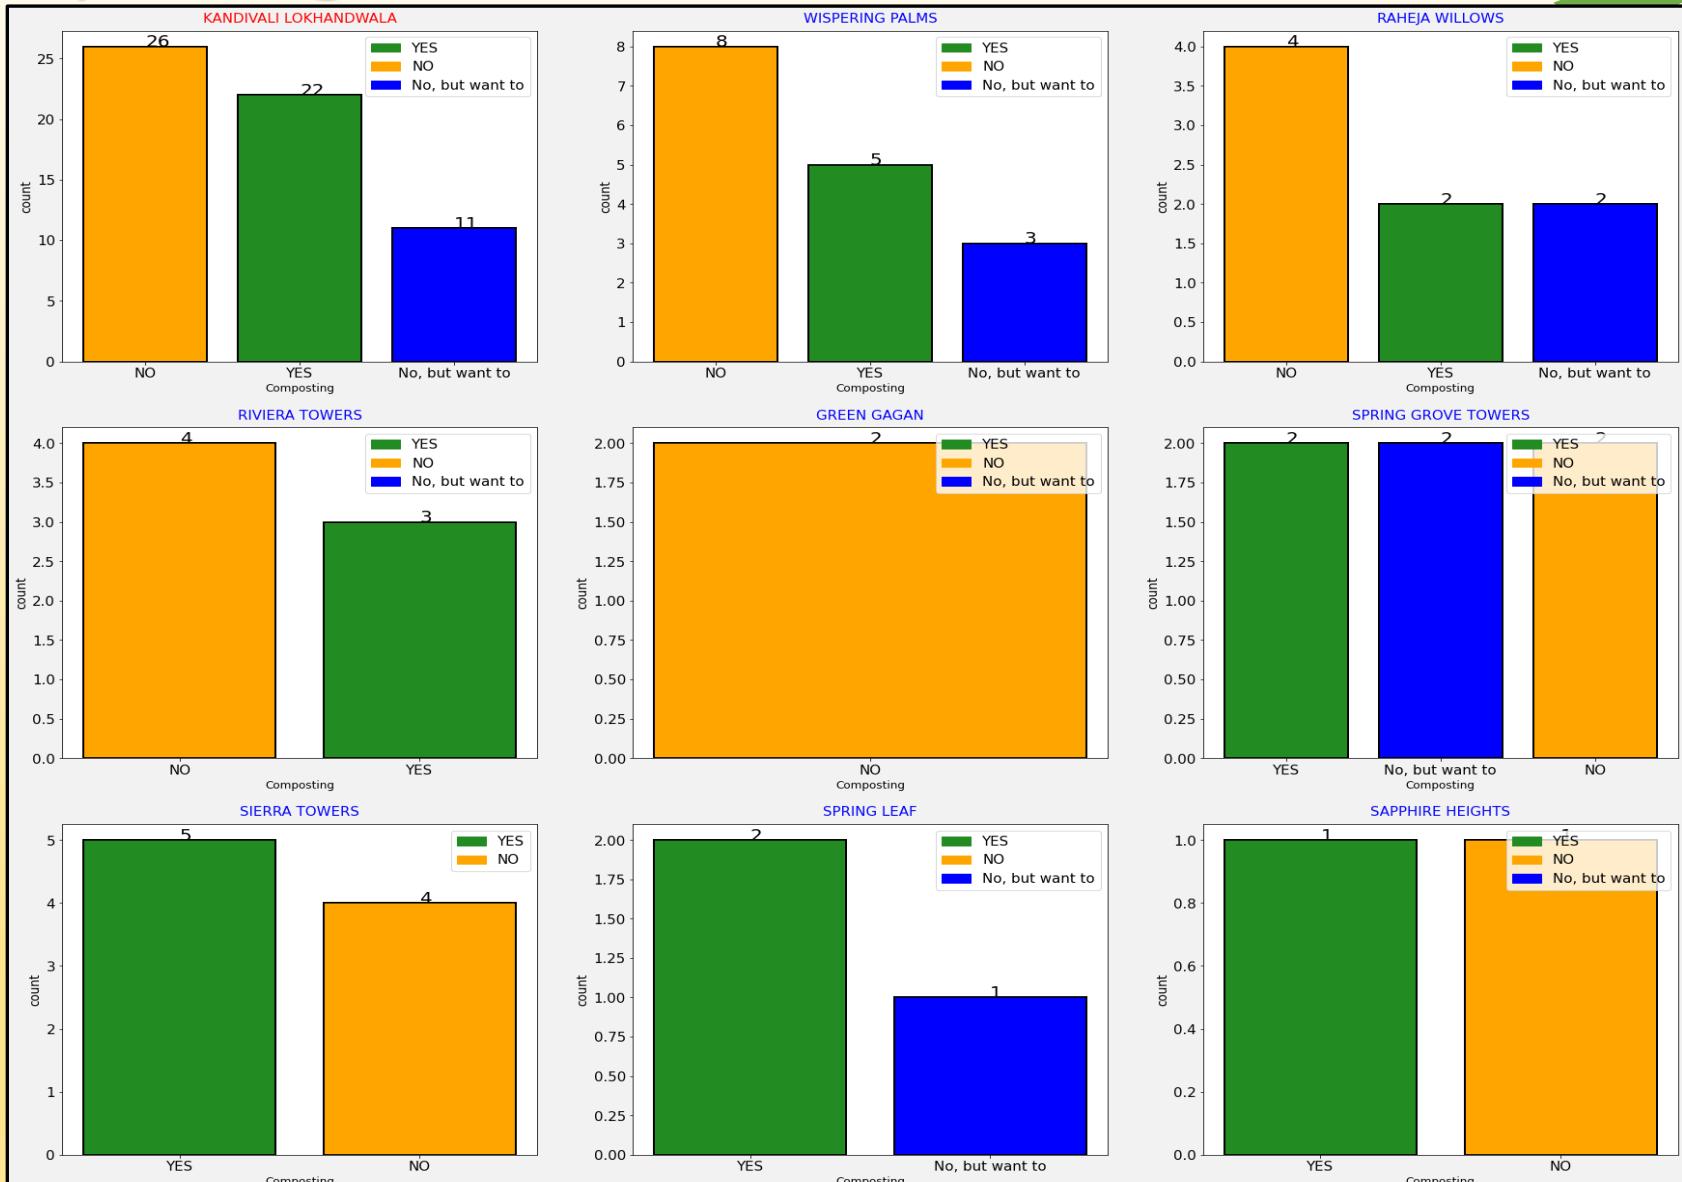

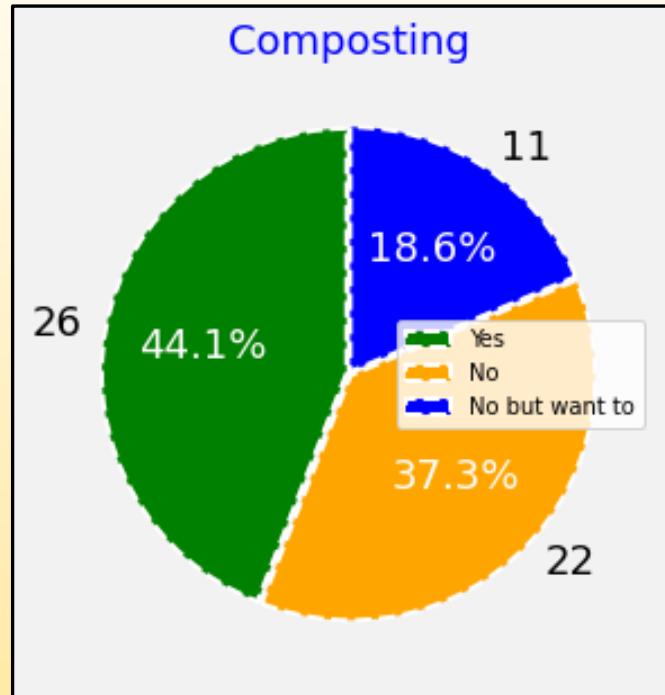

Distribution of how unused thermacol items are being disposed

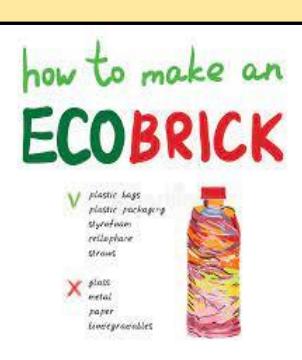

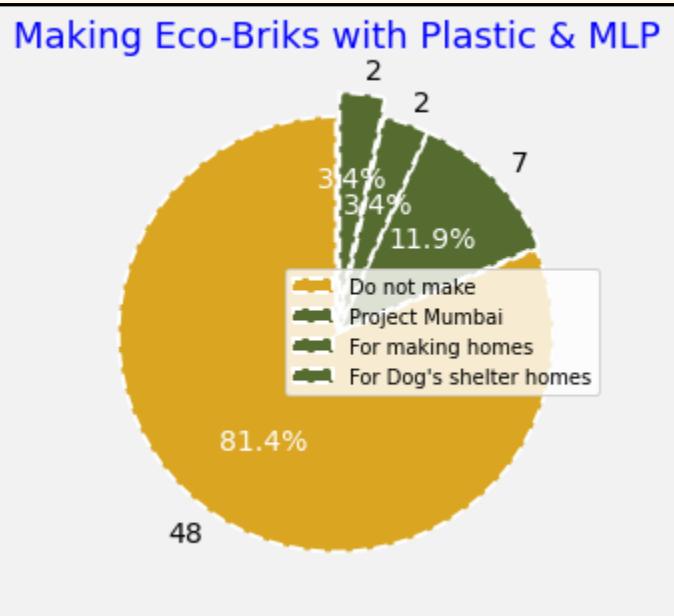

As per the survey, 58% of the locality people give away their unused thermacol as part of society's dry waste, as they are not aware of any recycling option in the locality.

Distribution of how composting is coming up in the area

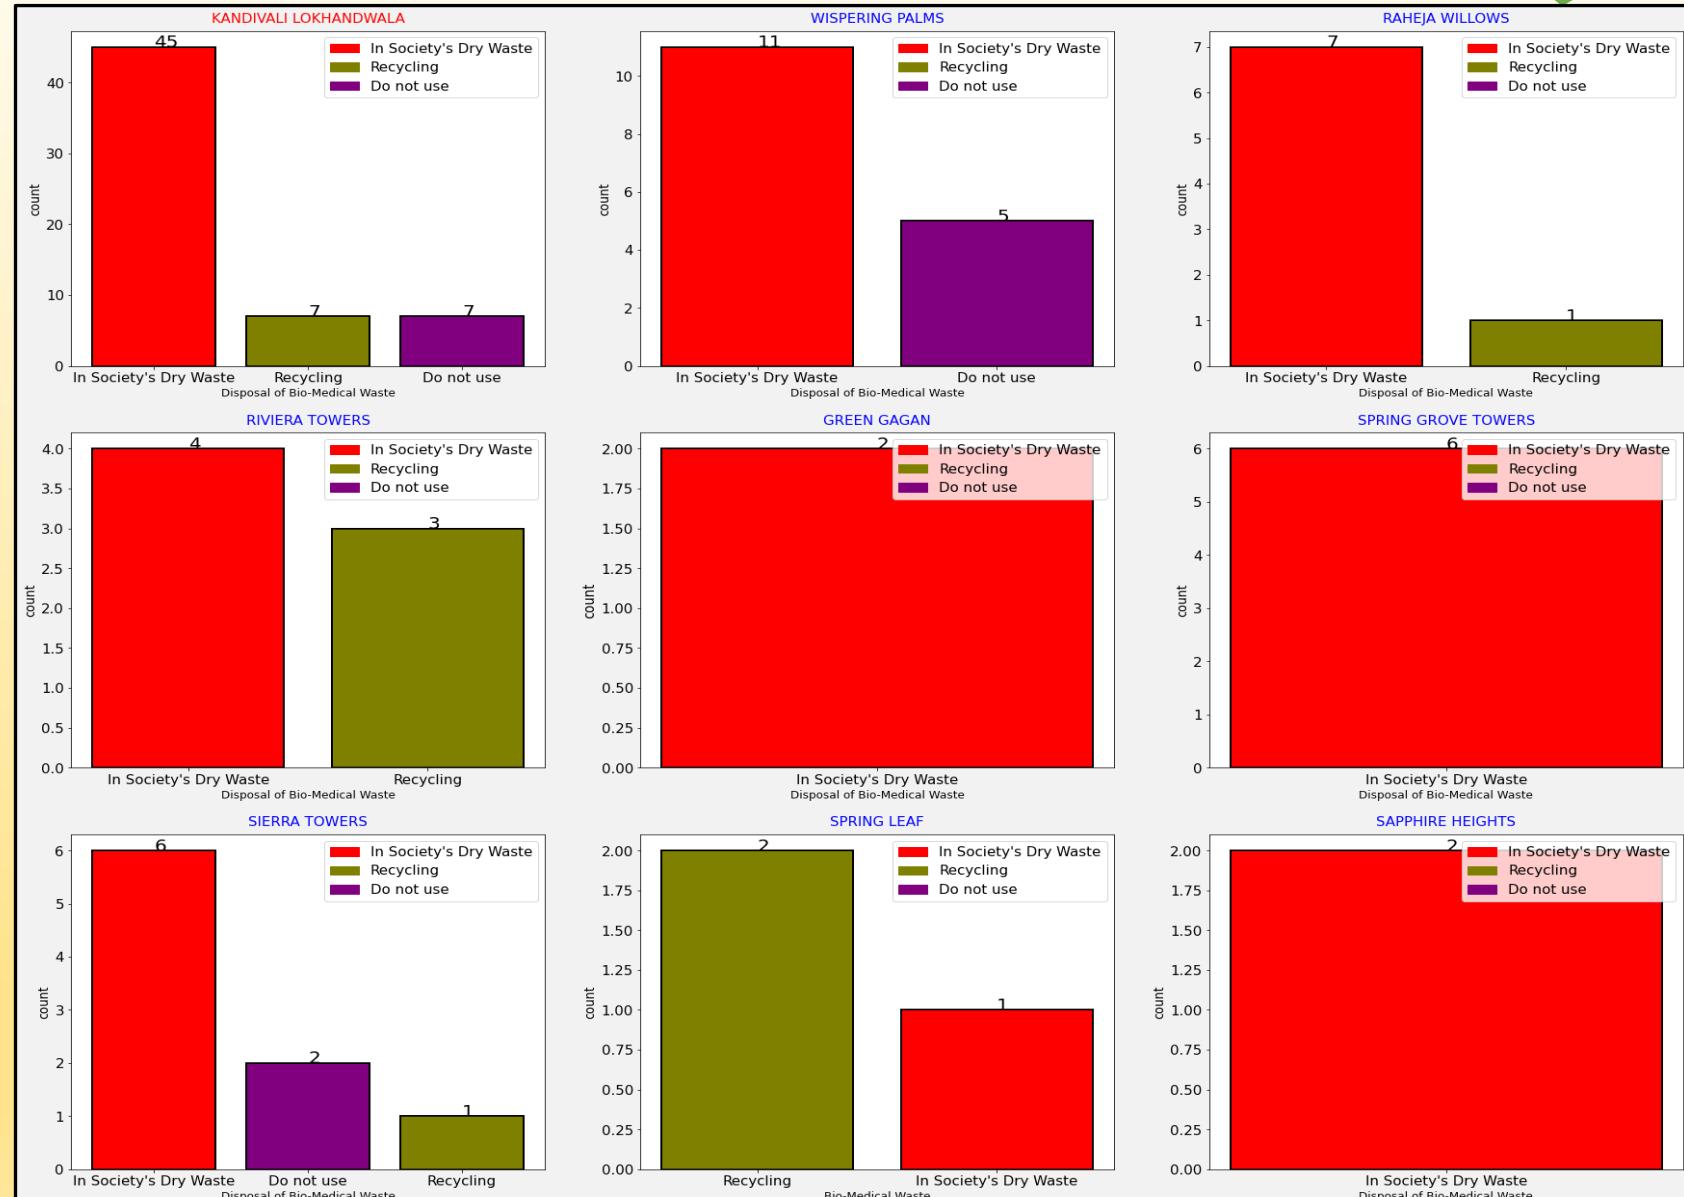

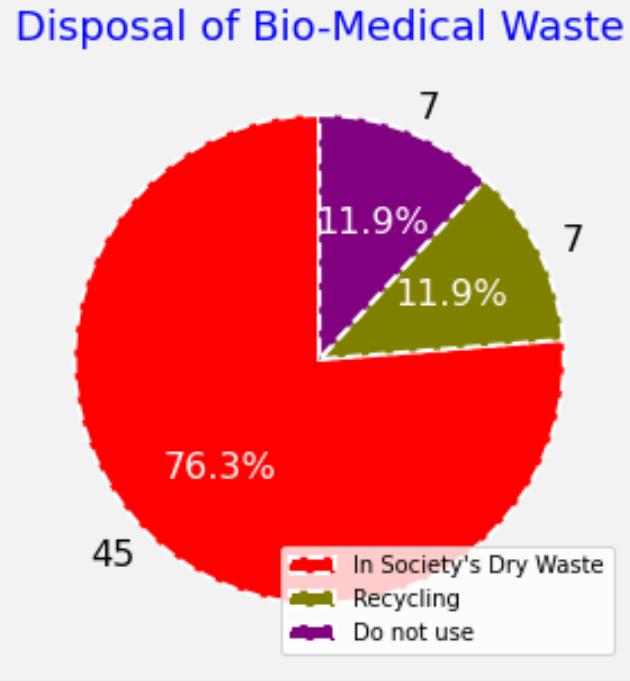

As per the survey, 44% of the locality people are doing composting, 19% more want to take up doing, but do not know how to go about doing.

Distribution in terms of opting to make eco bricks or not

As per the survey, 19% of the locality people make eco bricks. This trend can increase if users perform pickup from the area or locality people collectively make arrangements of sending it directly to the users.

Distribution of how Bio-Medical waste is being disposed by locality people

As per the survey, **76% of the locality people are giving this kind of waste in society's dry waste**
